

FormStream

Eliminate the need to print, scan and upload paper forms in the NHS

Features

- FormStream is a web-based electronic form (e-form) app you can use via web browsers across desktop and mobile devices
- Integrates with NHS and existing IT systems including SCI-Store, EDT, clinical portals, LDAP and email
- Auto-populates e-forms using patient administration system data
- Uploads directly to the Electronic Patient Record (EPR)
- Distributes completed forms to SharePoint, OneDrive and other secure storage platforms
- Save drafts and complete forms at a later stage
- Create and update forms on mobile or tablet, with offline capability and sync on return to clinic
- Fully encrypted data for secure information handling
- No client installation required.

Benefits

- Modernise processes with scalable document management software
- Improve efficiency with streamlined document workflow software
- Reduce duplication in paper-based processes
- Save time for clinical and administrative staff
- Lower print, postage and document handling costs
- Ensure patient information is accurate, up to date and instantly shared
- Enable secure access to completed forms across teams
- Improve data availability for reporting, analysis and audit
- Support collaboration across departments and service boundaries
- Strengthen data security while simplifying workflows.

FormStream has saved the NHS **£0.63+** per document*

* Source: NHS Tayside, 2014

FormStream integrates with national IT systems

Fulfilling NHS national requirements

- **File Note:** provision of outcomes relating to Mental Health using ICD10 clinical coding
- **CHAD:** assisting in the collection of community based health data and activity as NHS Scotland moves towards integrated health and social care
- **eMCCD:** supporting the national electronic Medical Certificate for Cause of Death (eMCCD) process with a unique SCI-Gateway assigned serial number.

Operation notes

- Search ICD10 or OPCS4 codes or descriptions and assign them directly inside the form – the full diagnosis or operation type is then displayed
- MDT (Multi-Disciplinary Teams): removing dictation and transcription waiting times, the meeting document can be completed in advance and completed during the meeting.
